

PostgreSQL psql Command Cheat Sheet

This cheat sheet provides quick reference commands for listing and inspecting tables in PostgreSQL using the `psql` CLI.

List all tables in the current schema: `\dt`

List tables in all schemas: `\dt *.*`

List tables in a specific schema: `\dt schema_name.*`

See detailed info about a table: `\d table_name`

Note on schema: By default, `search_path` is often `"$user", public`. If you created tables in another schema (e.g., `memory`), you may need to run: `\dt memory.*`
